

BMAA TECHNICAL INFORMATION LEAFLET (TIL)

TIL 069 ISSUE 2

SERIES MAJOR MODIFICATIONS

1. Introduction

BMAA major modifications that have been both well defined by the original applicant and for which quality control procedures have been put in place are defined as 'series' modifications. Subsequent applicants apply for these in the same way as for 'one-off' BMAA modifications (using form BMAA/AW/002a), but do not need to provide a technical justification.

Notes:

- Series modifications must be **identical** to the first approval; if there is any change or non-compliance with respect to the original MAAN then a new approval is required.
- Note that BMAA 'series' major modifications may **not** be applied for with a Permit revalidation application. This is because a Flight Release Certificate has to be issued and then signed by a BMAA Inspector.
- BMAA 'series' major modifications are now charged at a reduced rate (compared to 'one-off' modifications).

A list of existing BMAA 'series' modifications can be found below.

2. Existing BMAA Series Major Modifications

The table below contains a list of issued BMAA 'Series' Major Modifications (up to **January 2021 / MAAN 2864**). The 'Type(s)' and 'Brief description' are indicative only; the BMAA Technical Office should be consulted prior to applying for the modification to confirm the details of the modification.
