BMAA Inspectorate Notice: Inner Tubes

Dated: 23/11/2011

Note to all BMAA Inspectors

The Tech Office has received communication of some inner tube failures.

A particular example is that of a GT-450. An inner tube was found installed with a twist from the factory. This was rectified, however multiple deflations continued to occur afterwards.

The Tech Office would appreciate feedback generally on this subject. Are people experiencing problems with tyres and inner tubes?

Regards,
Rob
